

Government Policies That Alter the Private Market Outcome

- Price controls
 - Price ceiling: a legal maximum
 - Price floor: a legal minimum
- Taxes**
 - The govt can make buyers + sellers pay a specific amount on each unit bought/sold.

1

1

Taxes

- The govt levies taxes on many goods & services to raise revenue (national defense, public schools, etc.)
- The tax can be collected from buyers or sellers.
- The tax can be a percentage of the good's price, or a specific amount for each unit sold (*per-unit*).

2

2

A Tax on Buyers

3

3

A Tax on Buyers

New eq'm:

$$Q_e = 430$$

4

4

Tax Incidence -- how the burden of a tax is shared

Initially,

$$P_e = \$10.00$$

$$Q_e = 500$$

Now, with the tax, buyers pay \$1.00 more, sellers get \$0.50 less.

5

5

A Tax on Sellers

6

6

A Tax on Sellers

New eq'm:

$Q = 430$

$P_B = \$11.00$
 Difference between them
 $P_S = \$9.50$

$\$1.50$ tax

Effects of a \$1.50 per unit tax on sellers

Again, the tax is a "wedge."

7

The Outcome Is the Same in Both Cases!

A tax drives a wedge between the price buyers pay and the price sellers receive.

clq
8

Who Will Bear the Burden of a Tax?

Well, it depends ...

How "responsive" are buyers and sellers to a price change?

9

Who Will Bear the Burden of a Tax?

This "responsiveness" = "elasticity" for economists

10

Who Will Bear the Burden of a Tax?

Buyers' share of tax burden

Price if no tax

Sellers' share of tax burden

The more inelastic (i.e. steep) curve will bear the greater burden.

Supply is "flatter" than demand (more "elastic")

11

Government Policies ... and the Allocation of Resources

- Policies affect the allocation of society's resources.
- Implications...

Image of a triangle above sign.

Future policymakers: please apply these policies very carefully!

12

Welfare Economics

Welfare economics:

the study of how the allocation of resources affects well-being.

Consumer Surplus

Producer Surplus

Total Surplus

Market efficiency....

13

13

Demand...WTP

Willingness to pay - maximum amount the buyer will pay for a given Q

Thus, WTP measures buyer's "value."
(satisfaction, utility)

How does that compare with what the buyer must actually pay?

14

14

Consumer Surplus (CS)

Consumer surplus: amount a buyer is willing to pay minus what the buyer actually pays, or

$$CS = WTP - P$$

Suppose **WTP** = \$90

Suppose **P** = \$80

$$CS = \$90 - \$80 = \$10$$

15

15

Consumer Surplus

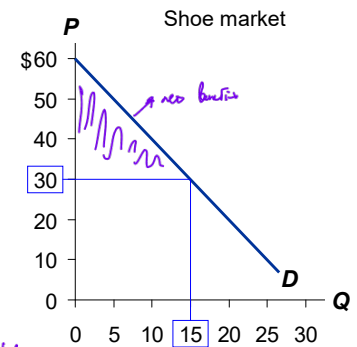

CS: Area below the demand curve and above the price

($A = \frac{1}{2} \times \text{base} \times \text{height}$)

Height: \$30

So,
 $CS = \frac{1}{2} \cdot 15 \cdot 30 = \225

no double-counting?

16

16

Price Changes Affect CS:

clq

17

17

Supply...WTS

■ **Cost:** value of everything a seller must give up to produce a good (i.e., opportunity cost)

- A seller will only produce and sell the good if the $P \geq \text{cost}$.
- Thus, *cost* is a *measure of willingness to sell* (WTS).
- What about WTS and P ?

18

18

Producer Surplus (PS)

Producer surplus: amount a seller is paid for a good minus the seller's cost, or

$$PS = P - \text{cost}$$

19

Producer Surplus

Suppose $P = \$40$.

At $Q = 15$, the seller's cost is

\$ 30,

PS = \$ 10

20

Producer Surplus

PS is the area b/w P and S .

$$PS = \frac{1}{2} \times b \times h$$

$$= \frac{1}{2} \times (40 - 15) \times 15$$

$$= \$187.50$$

21

Price Changes Affect PS:

clq
22

What Do CS, PS, and Total Surplus Measure?

CS = (value to buyers) - (amount paid by buyers)
i.e. benefit to buyers

PS = (amount received by sellers) - (cost to sellers)
i.e. benefit to sellers

Total surplus = CS + PS
= the total gains from trade in a market.
= (value to buyers) - (cost to sellers)

Is the market outcome efficient?

23

Evaluating the Market Equilibrium

Market eq'm:

$P = \$30$

$Q = 15,000$

Total surplus
= CS + PS
= \$75,000

- 1) Is the market eq'm efficient? Yes
- 2) Is total surplus maximized? Yes

24

23

24

The Free Market vs. Govt Intervention

- Can the govt raise total surplus in a competitive market? *No.*
- Laisssez Faire* (fr "allow them to do"): the notion that govt should not interfere with the market

25

25

Welfare "Tools" Applied...

- What happens to efficiency when taxes are introduced in a market?
- What about CS and PS with price controls?

26

26

The Effects of a Tax

No tax:

$$CS = A + D + C$$

$$PS = D + E + F$$

$$\text{Tax revenue} = C$$

$$\text{Total surplus} = C + A + B + D + E + F = A + B + D + E + F$$

27

27

The Effects of a Tax

With the tax,

$$CS = A$$

$$PS = F$$

$$\text{Tax revenue} = B + D$$

$$\text{Total surplus} = (A + F) + (B + D)$$

$$\text{Total surplus} \downarrow \text{ by } C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

$$C + E = \text{dead weight loss}$$

clq
28

28

DWL & Price Controls

(a) Reduced social surplus from a price ceiling

(b) Reduced social surplus from a price floor

DWL: dead weight loss; efficiency loss

29

29

DWL & Elasticity

Relatively *Inelastic*

Relatively *Elastic*

30

30

DWL & Elasticity

What about tax increases?

Double the tax, the DWL increases by *not 4 times!*

And revenue begins to decrease!

31

31

Revenue & Size of the Tax

Implications?

After a certain point, increasing taxes will not increase tax revenue.

Layered taxes?

The yellow being a city tax, not being the same one, and then being federal, for example. Or maybe higher levels of the federal tax structure.
